How Do I Install My Extensions?

Extension Installation, Activation, and Updates · https://wppopupmaker.com/docs/extension-installation-activation-and-updates/how-do-i-install-my-extensions/

Welcome to your new Popup Maker extension. By now, you should've downloaded your extension zip file from your Popup Maker account.

Follow these instructions to install your extension and turn on its license.

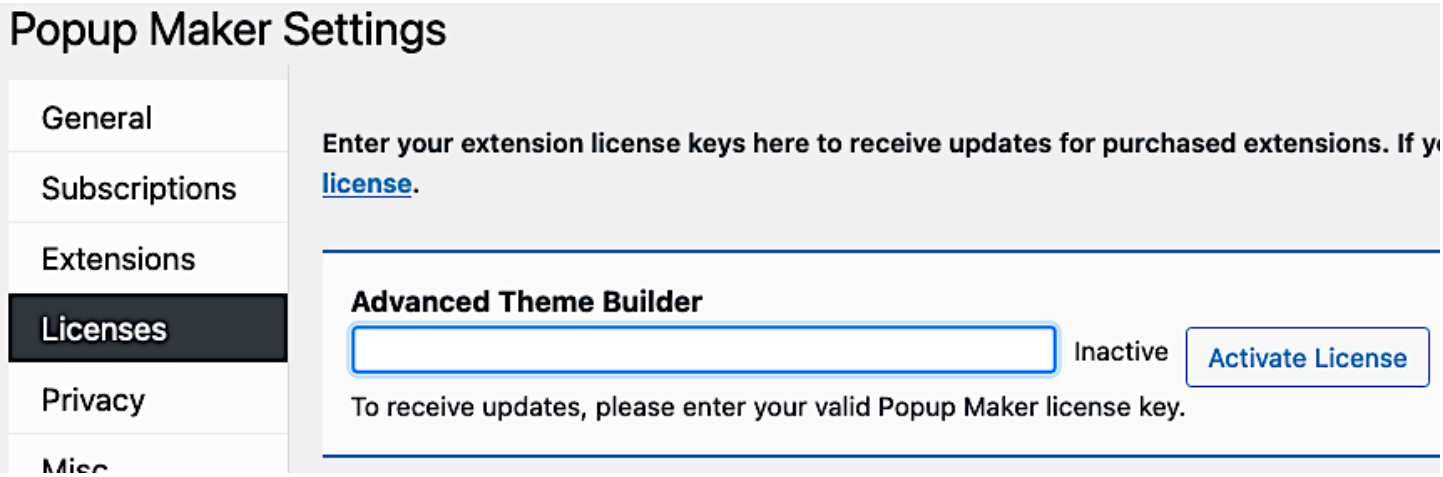

Install an extension

1. From your WordPress admin area, go to **Plugins** > **Add New**.
2. Click **Upload Plugin** at the top of the **Add Plugins** page.
3. Click **Browse...** and select your extension's zip file.
4. Click **Install Now**.
5. Click **Activate Plugin**.

Activate your extension license

1. Go to **Popup Maker** > **Settings**.
2. Click **Licenses**.
3. Find your extension. (**Note**: The WooCommerce Pro extension will not be on the list. See the next section.)
4. Enter your license and click **Activate License.**
5. Click **Save**.

In the screen capture below, you would enter the license for the **Advanced Theme Builder** extension and click **Activate License**. Be sure to click **Save** to save your changes.

WooCommerce Pro

At the time of writing, the **WooCommerce Pro** extension isn't showing on the **Popup Maker** > **Settings** > **Licenses** page. Our dev team is busy writing code to fix that.

In the meantime, you can confirm you installed the extension successfully by:

1. Creating or editing a popup.
2. Scrolling down to **Popup Settings**.
3. Click **Targeting**.
4. Click **Choose a condition**.
5. Type "Product".

If your **WooCommerce Pro** installed and activated, you'll see the **Product(s) in cart** targeting condition. That proves your **WooCommerce Pro** is good to go.
