Gravity Form Won’t Submit with AJAX Enabled

Problem Solving · https://wppopupmaker.com/docs/problem-solving/gravity-form-wont-submit-with-ajax-enabled/

A GravityForms form rendered with Popup Maker will not properly submit when the form includes a CAPTCHA field. GravityForms' own documentation states:

"***Please Note:*** *Due to limitations of reCAPTCHA, if your form contains a reCAPTCHA field it will not be able to submit via AJAX.*"

To resolve the problem, *remove the CAPTCHA field from the form.*

There are several additional ways to combat spam when using forms on your site:

1) Select a 'honeypot' setting in your form.

2) Use a spam detection and filtering plugin, like Automattic's Akismet or AntiSpam Bee from the WordPress.org plugin repository.

> Ninja Forms published an extensive blog post on the value of spam 'honeypots' and the pros and cons of adding a CAPTCHA field to your forms.
